PROFESSIONAL SUMMARY

Full-stack software engineer at NAV Fund Services with hands-on experience building enterprise **compliance and AML software** for fund administration. I'm a core developer on a Fund Screening platform built from scratch, working across **C#/.NET APIs, React/Redux UIs and SQL Server**: 200+ commits and 48 merged pull requests. I have a strong foundation in **data structures and algorithms**: CodeChef 4-star (1830) and 600+ problems solved.

TECHNICAL SKILLS

Languages	C#, JavaScript (ES6+), SQL / T-SQL, Java
Backend	.NET 10, ASP.NET Core Web API, REST APIs, Entity Framework Core, AutoMapper, Serilog, Swagger, Windows Services, Node.js, Express.js
Frontend	React.js, Redux, AG Grid, ExcelJS, HTML5, CSS3, Material UI, Bootstrap
Databases	Microsoft SQL Server (stored procedures, triggers, migrations), Redis, MongoDB
Testing & Tools	xUnit, Git, Azure DevOps (Boards, Repos, Pull Requests), Visual Studio, VS Code
Concepts	Data Structures & Algorithms, OOP, System Design, Caching Strategies, API Integration, Operating Systems, DBMS

PROFESSIONAL EXPERIENCE

Software Engineer
Jul 2025 – Present

NAV Fund Services

Fund Screening Platform (AML / KYC compliance automation) · C#, ASP.NET Core, React, Redux, SQL Server

- **Developed** a compliance platform from scratch that digitized the manual AML due-diligence workflow. Checklists are now created on the portal, World-Check, OFAC and LexisNexis checks run automatically, statuses update in real time, and the full screening can be exported. **Phase 1 passed UAT sign-off.**
- **Delivered** 200+ commits and 48 merged pull requests touching 500+ files across C# services, SQL Server and React. Owned features end to end, from database schema to API to UI, and maintained xUnit tests for the screening processors and repositories.
- **Built** the contacts module (create/edit drawer, ownership attributes, category mapping, checklist rules) and its **integration with the MDM (Master Data Management) service**. Fixed sync-delay and delete-payload bugs and migrated MDM data types.
- **Implemented** audit logging with SQL Server triggers and log tables plus API request logging. Tuned the stored procedures behind screening results and missing-document detection.
- **Centralized** the validation and completion-bar rules so the Screening Data and Screening Result screens always show the same status. Extended the Excel export with AML plan, risk-rating and review sheets that keep comment formatting.
- **Built** an in-app feedback system that automatically records the page, user, environment and time, takes a screenshot, and uploads attachments to the document management system.
- **Currently building Phase 2:** contact search and copy across business clients, a Residence Zip attribute for LexisNexis checks, screening progress on Due Diligence records, fields that change with jurisdiction, and automated web search.

Platform & Infrastructure

- **Secured** service-to-service messaging by migrating the pub/sub services from HTTP to HTTPS.
- **Refactored** data types and variables across the entire application, keeping every layer consistent without regressions.
- **Ran** a Redis caching proof of concept and wrote the design document comparing Cache-Aside vs Read-Through and Write-Through vs Write-Behind (consistency, cache-stampede risk, fit with .NET).

PROJECTS

Path Visualizer | React.js, JavaScript, CSS — Live Demo

- Built an interactive tool that animates **Dijkstra's algorithm, Breadth-First Search (BFS) and Depth-First Search (DFS)** on a 17 × 24 grid.
- Users choose the start and target nodes and draw walls, then watch each algorithm explore the grid and trace its path.

EDUCATION

Malaviya National Institute of Technology (MNIT), Jaipur
2021 – 2025

B.Tech, Electronics and Communication Engineering · **CGPA: 8.32/10** — Jaipur, India

- Data Structures & Algorithms: **A+ grade**, ranked in the top 10 of the course. Also studied Operating Systems, OOP and DBMS.

ACHIEVEMENTS & LEADERSHIP

- **CodeChef 4-star (max rating 1830)**. Ranked **17th of 3,000+** participants in CodeChef Starters 105.
- **Codeforces Pupil (1302)**, with **600+ problems** solved across LeetCode and GeeksforGeeks.
- Ranked **10th of 100+** students in a contest organized by MNIT and AlgoUniversity.
- Submentor at the Codeshows coding club (2023–24) and member of the IEEE Student Branch (2022–23).
